

Cannabis Resource Optimization Program Voluntary Program Enrollment Form

For Eligible Licensed Cannabis Cultivation Businesses

To assist Colorado cannabis cultivation facilities in realizing these opportunities, the Colorado Energy Office (CEO) has developed the Cannabis Resource Optimization Program (CROP). The program is designed to provide eligible cannabis cultivation businesses with no-cost technical assessments to better understand energy and water use drivers and identify cost-effective resource management opportunities.

The program will provide participants with a personalized and confidential on-site technical assessment and report, energy use analysis, schedule optimization opportunities and benchmark insights; displaying when, where and how they use electricity in their current cultivation operations. Participants will also be presented with utility rebate opportunities for future equipment upgrade opportunities.

In addition to the technical assessment offering, CEO will partner with the Colorado Clean Energy Fund to provide financing to help program participants implement identified efficiency measures. Participants are under no obligation to make improvements or changes at any time. The program is strictly an informational service intended to help businesses understand their current energy use and related costs. Program services are provided at no cost to licensed cannabis cultivation businesses by Resource Innovations on behalf of the Colorado Energy Office.

Program Services to Be Provided

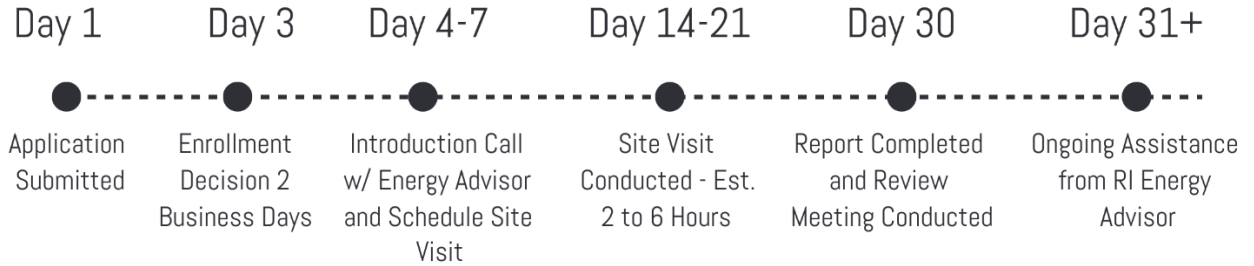

- A personalized on-site ASHRAE Level 2 assessment of your facilities energy and water use.
- A report outlining energy and water use against production trends and other metrics.
- Potential equipment upgrade opportunities and savings analysis.
- Assistance with completion of Colorado Clean Energy Fund financing application.
- Identification of local utility, municipality, and other rebate opportunities.
- Access to energy engineers and project assistance for the length of the program.

Program Eligibility Criteria

- Be an active cannabis cultivation facility holding all required state and local licenses.
- Operate a cannabis cultivation facility outside of Xcel Energy CO, Black Hills Energy and Platte River Power Authority territory.
- Minimum combined monthly electric and gas utility bill of \$5,000.

All individual information will be kept confidential. Summarized results of the project may be anonymized and compiled to be shared with CEO-staff for future program planning purposes.

Enrollment Timeline

Agreement To Participate

Cultivation Company Name: _____

Cultivation Facility Address: _____

Facility Electric Provider: _____

Facility Gas Provider: _____

Cultivation Facility Address 2 (if applicable): _____

Facility Electric Provider 2 (if applicable): _____

Facility Gas Provider 2 (if applicable): _____

Individual To Contact: _____

Phone: _____ Email: _____

Signature: _____ Date _____

Preferred Contact Method (Check): Email Phone Text
